## Converting LENGTH Units

It is easiest to use a conversion look-up diagram like the one below.

5km = ? m **Need to x 1000**

5 x 1000 = 5000m ✓

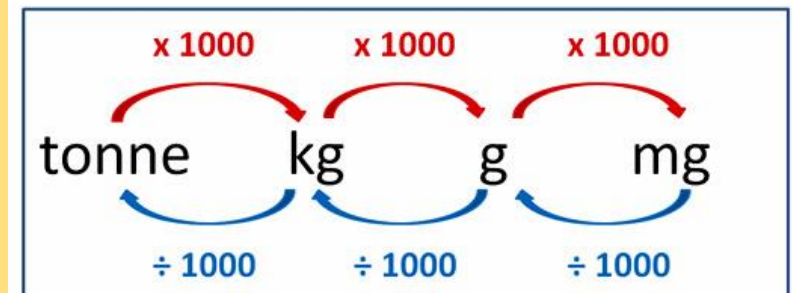

120cm = ? m **Need to ÷ 100**

120 ÷ 100 = 1.2m ✓

## Converting MASS Units

The Mass for weighing objects in Metric Units is similar to Capacity for Volumes.

In the Metric System, Mass is based on the Gram or "g" unit.

Mass conversions use 1000's, and usually create fairly large results.

1.6 tonne = ? kg **Need to x 1000**

1.6 x 1000 = 1600 kg ✓
